

Authorized by: F. Lortie M. Losier

Please fill out this form before submitting a sample. Record all information <u>clearly and legibly</u> as it should appear on the report. This includes the address and PID if available, the date and time of sampling, and the initials of the person who took the sample. The report will be emailed to the specified addresses.

Please refer to the sampling instructions on the back of this form.

General sampling instructions:

Sampling must be done with care. Wash hands before sampling to avoid the possibility of contamination. Please read through the entire procedure before starting. <u>The sample must be collected in the sterile bottle provided</u> <u>by the laboratory.</u>

- 1- Collect sample from a cold-water tap, inside if possible. If applicable, remove the filters or any ventilation devices and wash the end of the tap with a disinfectant (e.g. bleach). Purge the pipe at least five minutes before collecting the sample.
- 2- Open the bottle only when ready to collect the sample and avoid touching the inner surfaces of the bottle and the cap. Do not put the cap on a surface that could contaminate it. Reduce the water flow and collect the sample directly into the bottle, filling it to the 100mL line, and replace the cap.
- 3- Fill in the information on the label provided and affix it to the bottle.
- 4- Keep the sample at a temperature below 10°C at all time without freezing and bring it to the VALORES sample reception with the sample submission form duly completed as soon as possible (<u>maximum 30h</u>). A sample may be rejected if it is received in conditions that could compromise the validity of the results, i.e. high temperature, non-compliant bottle, maximum delay after sampling exceeded, etc.
